Official meeting of the representatives of the Visegrad Group of Transport Ministries, extended by the representatives of Austria, focused on smart mobility with a special emphasis on intelligent transport systems and connected, cooperative and automated mobility. The event is organized as part of the V4 Czech Presidency.

## 15:00 / SMART CITIES A SOCIÁLNÍ INOVACE

*Agora II (national zone), CZ/ENG, till 16:30*

The originally purely environmental and then technological concept of smart cities has in recent years also had to cope with new economic and social challenges brought about by Industry 4.0, Society 4.0, demographic changes and other trends. Among the key problems that can be solved with the help of the development of smart cities are housing (in)availability, the problem of population aging, the economic and social sustainability of city districts and localities and, last but not least, digital literacy. For the successful implementation of smart city projects, the support of innovative financial instruments is necessary as well. The presentation also refers to the outputs of TAČR projects.
